## Question 1

Correct

Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time

complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

**Note:** No need of counter increment for declarations and scanf() and count variable printf() statements.**Input:**

A positive Integer n

**Output:**

Print the value of the counter variable

**Answer:**

```
1  #include<stdio.h>
2  int count=0;
3  void function(int n)
4  {
5      int c= 0;
6      count++;
7      for(int i=n/2; i<n; i++){
8          count++;
9
10
11         for(int j=1; j<n; j = 2 * j){
12             count++;
13
14
15             for(int k=1; k<n; k = k * 2){
16                 count++;
17
18                 c++;
19                 count++;
20             }
21             count++;
22         }
23         count++;
24     }
25     count++;
26     printf("%d",count);
27 }
28 int main(){
29     int n;
30     scanf("%d",&n);
31     function(n);
32 }
```

	Input	Expected	Got	
✓	4	30	30	✓
✓	10	212	212	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
